

# SMARTer MANAGER

## PRODUCTION ORDERS

SMARTer Manager recognizes that Production Managers depend on the information retrieved – or not retrieved – from the Production Orders. It is with this important job function in mind, as well as others, that SMARTer Manager makes Production the heart and soul of our solution.

We know that the ability to retrieve shop floor knowledge about the daily production activities in the factory is very important. We've created a powerful tool that can optimize and deliver the information, where you need it, when you need it. And in real-time.

Your customers have an increased need for information and are demanding the status of their orders. Every detail about the open or historical jobs are available, including specifications, scheduling information, materials needed and used, related shipments, job costs, work centers and all the steps in the production process.

The production module also allows you to retrieve related job costs and analyze your profitability in real time, without having to wait until the job actually ships. You can identify cost statistics per part, per hour or total quantity as it relates to the items ordered, produced and shipped.

Accurate, real-time data is available to you 24 hours-a-day, 7 days-a-week, and all orders entered into the system can be viewed. Historical data, including orders from last quarter, last month and last week, is instantly accessible, keeping you informed about past projects and helping you to plan for the future.

Another unique aspect is the ability to support multiple job types. These job types allow make-to-order, repetitive, and mixed-mode manufacturers to tailor each job to the appropriate production model. SMARTer Manager's job types include standard, template, blanket order, master assembly, subassembly and component.

With job types you are able to link specific options and features to each job. The Production module allows for production queries, such as the last time a part was made or a job performed.

Required	Qty. Required	Target	Production Qty	Release	Shipped	Balance	Returned	Comment
4/23/2006	25	4/18/2006	25				25	

You can pull up historical information and reuse it, rather than spending valuable time and personnel reentering the same data. With SMARTer Manager's Production capabilities, you are in charge of the most valuable commodity in your facility: Information.
